DEEP VALUE FUND

MARKET UPDATE AND COMMENTARY

The US economy grew at 3.1% during the second quarter of 2017, the fastest growth in 2 years. The growth is particularly impressive given the disruptive effects of two large hurricanes in Texas and Florida. Consumer spending grew at 2.4% whilst the unemployment rate fell to 4.2%, the lowest since February 2001. We have in the past been critical of the Federal Reserve and its dovish monetary stance which has displayed an overt reluctance to normalise its expansionary monetary policy. It is highly likely that the Federal Reserve will raise rates by 25 basis points in December though such a rise will still fall short of an appropriate normalisation. The relaxed stance heightens overheating risks for the US economy as the boom cycle matures. Domestically our monetary policy remains in a prolonged holding pattern with little likelihood of any upward move on rates. Consequently, the spread between the US 10-year note yield and the Australian 10-year bond has compressed to about 30 basis points. This compression has currency implications for the Australian Dollar which has enjoyed a premium from the carry spread between the two securities. As the spread further condenses, the AUD should come under further pressure.

Microequities Deep Value Fund returned 0.88% versus the All Ordinaries Accumulation Index 4.06% in October; this brings the total return net of fees to 565.04% for the Fund since inception in March 2009 compared to 176.69% for the All Ordinaries Accumulation Index.

As flagged last month, we are in the midst of selling out of a few business partnerships that will see the total number reduce to or below our self-imposed limit of 40 companies. We successfully exited one business partnership in the financial services space. The cash position of the Fund has risen from 4.7% to 7.7%. Investors should expect this cash position to rise over coming months. The sell down on a small number of business partnerships at what we consider excessive market values follows our investment principles. The investment management team will maintain historically larger levels of cash assets (typically we have held between 2-5%) to remain vigilant for potential pricing anomalies that might present themselves over the short to medium term. On an intrinsic value growth profile, FY18 presents itself as a standout year of growth for the Fund's constituents.

Projected EPS Growth FY18 (on a weighted basis)	+26.9%
Projected EPS Growth FY19 (on a weighted basis)	+22.1%

Number of companies	41
Top 5 Holdings % of NAV	28.9%
Top 10 Holdings % of NAV	45.8%
Top 20 Holdings % of NAV	70.8%
Cash Position % of NAV	7.7%
